1 [Fast detection of communication patterns in distributed executions](#)

Thomas Kunz, Michiel F. H. Seuren

November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research CASCON '97**

Publisher: IBM Press

Full text available:  [pdf\(4.21 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

4 [Information protection methods: Display-only file server: a solution against information theft due to insider attack](#)

 Yang Yu, Tzi-cker Chiueh

October 2004 **Proceedings of the 4th ACM workshop on Digital rights management DRM '04**

Publisher: ACM Press

Full text available:  [pdf\(311.80 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Insider attack is one of the most serious cybersecurity threats to corporate America. Among all insider threats, information theft is considered the most damaging in terms of potential financial loss. Moreover, it is also especially difficult to detect and prevent, because in many cases the attacker has the proper authority to access the stolen information. According to the 2003 CSI/FBI Computer Crime and Security Survey, theft of proprietary information was the single largest category of los ...

Keywords: access, digital rights management, information theft, insider attack

5 The V distributed system

 David Cheriton

March 1988 **Communications of the ACM**, Volume 31 Issue 3

Publisher: ACM Press

Full text available: .pdf(2.55 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

The V distributed System was developed at Stanford University as part of a research project to explore issues in distributed systems. Aspects of the design suggest important directions for the design of future operating systems and communication systems.

6 Xen and the art of virtualization

 Paul Barham, Boris Dragovic, Keir Fraser, Steven Hand, Tim Harris, Alex Ho, Rolf Neugebauer, Ian Pratt, Andrew Warfield

October 2003 **ACM SIGOPS Operating Systems Review , Proceedings of the nineteenth ACM symposium on Operating systems principles SOSP '03**, Volume 37 Issue 5

Publisher: ACM Press

Full text available: .pdf(168.76 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Numerous systems have been designed which use virtualization to subdivide the ample resources of a modern computer. Some require specialized hardware, or cannot support commodity operating systems. Some target 100% binary compatibility at the expense of performance. Others sacrifice security or functionality for speed. Few offer resource isolation or performance guarantees; most provide only best-effort provisioning, risking denial of service. This paper presents Xen, an x86 virtual machine monit ...

Keywords: hypervisors, paravirtualization, virtual machine monitors

7 Manufacturing resource planning on a PC local area network

 H. Clark Kee, Roy L. Post

May 1986 **ACM SIGAPL APL Quote Quad , Proceedings of the international conference on APL APL '86**, Volume 16 Issue 4

Publisher: ACM Press

Full text available: .pdf(1.47 MB) Additional Information: [full citation](#), [abstract](#), [index terms](#)

This paper details a large APL programming project of 12 man years. An integrated software system structured on the principles of MRP (manufacturing resource planning) was implemented by a Bristol-Myers in house team for use in a new manufacturing facility. The system applies off-the-shelf technology in innovative ways, using STSC APL*PLUS/PC as the only programming language, to build a very sophisticated application on IBM/PCs fully sharing data in a secure environment via the N ...

8 Draft report of the Federal Internetworking Requirements Panel, and selected responses

 Diane Fountaine

April 1994 **ACM SIGCOMM Computer Communication Review**, Volume 24 Issue 2

9 Flow-insensitive type qualifiers

 Jeffrey S. Foster, Robert Johnson, John Kodumal, Alex Aiken
November 2006 **ACM Transactions on Programming Languages and Systems (TOPLAS)**,
Volume 28 Issue 6

Publisher: ACM Press

Full text available: [!\[\]\(f80254b170d0ecdc443847276e625120_img.jpg\) pdf\(910.93 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We describe flow-insensitive type qualifiers, a lightweight, practical mechanism for specifying and checking properties not captured by traditional type systems. We present a framework for adding new, user-specified type qualifiers to programming languages with static type systems, such as C and Java. In our system, programmers add a few type qualifier annotations to their program, and automatic type qualifier inference determines the remaining qualifiers and checks the annotations for consistency ...

Keywords: Type qualifiers, const, constraints, security, static analysis, taint, types

10 Subject-oriented composition rules

 Harold Ossher, Matthew Kaplan, William Harrison, Alexander Katz, Vincent Kruskal
October 1995 **ACM SIGPLAN Notices, Proceedings of the tenth annual conference on Object-oriented programming systems, languages, and applications OOPSLA '95**, Volume 30 Issue 10

Publisher: ACM Press

Full text available: [!\[\]\(07e95c4c760ed8b72579d140ce510c89_img.jpg\) pdf\(2.02 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Subject-oriented programming supports composition of object-oriented programs or program fragments called *subjects*. This paper presents an approach to the *composition rules* used to specify composition details. Rules can be generic, allowing different subrules to be "plugged into" higher-level rules, and they include a means of specifying exceptions to general rules. We give definitions of a number of useful, generic rules, including *merge* and *override*, as a first step ...

11 Risks to the public: Risks to the public

 Peter G. Neumann
May 2006 **ACM SIGSOFT Software Engineering Notes**, Volume 31 Issue 3

Full text available: [!\[\]\(1f22188757847a0ffb7e4386ed38dfee_img.jpg\) pdf\(110.42 KB\)](#) Additional Information: [full citation](#), [index terms](#)

12 Computer networks (CN): A study for provisioning of QoS web-based services to the end-user

 Yannis Mitsos, Fotis Andritsopoulos, Dimitrios Kagklis
March 2004 **Proceedings of the 2004 ACM symposium on Applied computing SAC '04**

Publisher: ACM Press

Full text available: [!\[\]\(276e638389c99b8d70cec5b1b95df546_img.jpg\) pdf\(249.34 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

Although QoS provision has been researched extensively for B-ISDN (ATM based) networks and it is also under research for IP networks (Internet), until recently there was no real service environment to provide such QoS to end users. Demonstrators and laboratory experiments aimed mainly at proving specific technologies and architectures. Recent advances in the commercialisation of technology and respective standardisation effort have changed the
